

Is it mission-critical or strategic?

	Strategic	Non strategic
Innovation/New Development and Test/Pilots	External private clouds (externally hosted)	Public clouds
Mission-critical	Internal private clouds (internally hosted)	Community clouds or higher-grade SLA clouds

Enterprise gaps

- “Enterprise-grade” central cloud management for large server and application farms
 - How to do I go from simple virtualization to a true private cloud for enterprise level (1000’s) server and application farms?
- Workload/application abstraction:
 - Users and application developers don’t need or care to know which cloud (internal or external) they are using.

Interoperability and standards

Bold predictions

“I think, in three years, the industry will get to 40 percent in the cloud. In five years and beyond, it could get to 70 percent.”
